

Get-Rescue Calculation Fields

Sep 26, 2026

Every field the system uses to calculate money, and the formula each one feeds. There are three separate calculations: the customer's fee, the customer's invoice, and the vendor's payout.

1. Customer fee

Held on the ticket. The fee is collected in two stages, each with its own payment mode and its own confirmation flag.

Field	Meaning	Entered or calculated
Total Service Fee	The agreed price, including GST	Entered by the agent
Booking Fee	Taken upfront, before dispatch	Entered by the agent
Remaining Fee	Total Service Fee – Booking Fee	Calculated
Client Charge	A contracted client's share	Entered by the agent
Rescue Charge	Total Service Fee – Client Charge – Booking Fee	Calculated

Confirming each stage

Stage	Payment mode	Confirmed by
Booking fee	Payment Method	BF Payment Status = PAID
Remaining fee	Payment Method (Final)	Payment Received = Yes

Both modes offer Cash, UPI, Card, Net Banking and Payment Gateway. A transaction ID is stored for gateway payments, and a receipt photo is required for every other method.

Adjustments at closure

Field	Effect
Extra Payable	Added to the invoice
Refund Amount	Subtracted, when Refund Due is Yes

The figure carried forward is not the fee as first quoted. It is recalculated at closure from what was actually collected:

$$\text{Final Fee} = \text{Booking Fee}_{\text{if paid}} + \text{Remaining Fee}_{\text{if paid}} - \text{Refund Amount}$$

A fee quoted but never collected does not reach the invoice.

2. Customer invoice

Raised in Zoho Books automatically when the ticket is closed.

What the invoice is raised on depends on the client type.

	Walk-in customer (ON DEMAND)	Contracted client
Raised when	The closure is fee-bearing	Closure Status is Completed
Amount	Final Fee + Extra Payable	Rescue Charge

A contracted client is invoiced only for the rescue company's own share, not the whole fee. Either way, no invoice is raised if the amount is zero.

GST is 18%, calculated inclusive. The amount is what the customer paid, so the taxable value is worked backwards out of it:

Line	Formula
Service Charges	$\text{Amount} \times 100 \div 118$
CGST	$\text{Service Charges} \times 9\%$
SGST	$\text{Service Charges} \times 9\%$
Round Off	$\text{Amount} - (\text{Service Charges} + \text{CGST} + \text{SGST})$
Invoice Total	The original amount

Each line is rounded to two decimals before the next uses it. Round Off absorbs the residue — it can be positive or negative — so the invoice total always equals exactly what the customer paid.

Place of Supply is set to Karnataka. The invoice number is written back onto the ticket once raised.

3. Vendor payout

A completely separate calculation from the customer's fee. The rates come from the vendor's record, the quantities from the case.

Rates — from the Vendor table

Field	Used for
Base Fee	The flat charge for attending the job
Base KM	Distance already included in the Base Fee
KM Rate	Charge for each slab beyond Base KM
KM Slab — Repair	Slab size for repair jobs
KM Slab — Tow 2W Flatbed	Slab size, flatbed tow, two-wheeler
KM Slab — Tow 4W Flatbed	Slab size, flatbed tow, four-wheeler
KM Slab — Tow 2W Manual	Slab size, manual tow, two-wheeler
KM Slab — Tow 4W Manual	Slab size, manual tow, four-wheeler
TDS Percentage	The withholding rate agreed with this vendor
GST Number	A vendor with a GSTIN has GST calculated; without one it is zero

Only **one** of the five KM Slab fields is used per case. Which one depends on the service type, whether the tow is flatbed or manual, and whether the vehicle is a two- or four-wheeler.

Quantities — from the case

Field	Used for
Travel Kms (repair)	The distance the KM fee is charged on
Vendor Round-trip Kms (tow)	The distance the KM fee is charged on
Extras	Added to the Gross Fee
Remaining Fee	Becomes Cash Collected, if settled in cash

The formulas

```

\begin{aligned}
\text{KM Fee} &= \left\lceil \frac{\text{Actual KM} - \text{Base KM}}{\text{KM Slab}} \right\rceil \times \text{KM Rate} \\
\text{Gross Fee} &= \text{Base Fee} + \text{KM Fee} \\
\text{Net Fee} &= \text{Gross Fee} + \text{Extras} \\
\text{Balance} &= \text{Net Fee} - \text{Cash Collected} \\
\text{Final Payable} &= \text{Net Fee} - \text{TDS} - \text{Cash Collected} \\
\text{GST Payable} &= \text{Net Fee} \times 18\%
\end{aligned}

```

The KM fee is zero while the distance travelled is within Base KM. Beyond it, distance is charged in whole slabs, always rounded up.

Cash Collected is worked out by the system, never typed. It equals the Remaining Fee, but only when that fee was settled in **Cash** and marked received. The booking fee is never counted — it is taken before a vendor is assigned, so no vendor can have received it.

TDS is calculated across the whole payment batch, then shared between the cases in proportion to their Net Fee. This matches the figure sent to Zoho Books exactly. Checking a single case against Net Fee × rate can therefore differ by a paisa.

GST is not deducted from the Final Payable. It is a liability the vendor invoices on top, unlike TDS which is withheld.

Worked examples

Example 1 · Walk-in repair, paid online

Total Service Fee ₹2,500 — booking fee ₹500 and remaining ₹2,000, both by payment gateway. Vendor rate card: Base Fee ₹1,000, KM Fee ₹500, Extras ₹200, TDS 1%, GSTIN on file.

Final Fee	₹2,500.00
Invoice — Service Charges	₹2,118.64
Invoice — CGST	₹190.68
Invoice — SGST	₹190.68
Invoice — Round Off	₹0.00
Invoice Total	₹2,500.00

Vendor Gross Fee	₹1,500.00
Vendor Net Fee	₹1,700.00
Cash Collected	₹0.00
TDS at 1%	₹17.00
Vendor Final Payable	₹1,683.00
Vendor GST Payable	₹306.00

Cash Collected is zero because the customer paid by gateway, so the vendor received nothing directly.

Example 2 · Contracted client

Total Service Fee ₹2,500, of which the client's own share is ₹2,000. No booking fee.

Vendor: Base Fee ₹800, no KM fee, TDS 2%, no GSTIN.

Rescue Charge	₹500.00
Invoice raised on	₹500.00 — not the full ₹2,500
Invoice — Service Charges	₹423.73
Invoice — CGST	₹38.14
Invoice — SGST	₹38.14
Invoice — Round Off	–₹0.01
Invoice Total	₹500.00
Vendor Net Fee	₹800.00
TDS at 2%	₹16.00
Vendor Final Payable	₹784.00
Vendor GST Payable	₹0.00 — no GSTIN

Round Off is negative here: the three rounded lines add to ₹500.01, one paisa above the amount, so a paisa is taken back. The invoice total still matches exactly.

Example 3 · The same job as example 1, but paid in cash

Only one field differs — the remaining fee was settled in cash rather than by gateway, so the vendor is holding ₹2,000.

Vendor Net Fee	₹1,700.00
Cash Collected	₹2,000.00
Balance	-₹300.00
Final Payable	-₹317.00

The vendor collected ₹300 more than they are owed, so the balance runs the other way — the vendor owes the company.

The system currently refuses to record a payment in this situation. A safety check rejects a negative Final Payable and writes nothing, so the batch cannot be settled. This is not unusual: it happens on any cash-settled job where the customer price exceeds the vendor payout. A decision is needed on how it should be handled — typically the balance is carried to that vendor's next payment run.
